
数学软件——短学期课程

Matlab 第二次作业

姓名：汪利军
学号：3140105707
班级：统计 1401

2016.07.11

目 录

1	问题重述	2
2	有限差分推导	2
3	边界条件	7
3.1	左边界	7
3.2	右边界	7
3.3	上边界	8
3.4	下边界	9
3.5	节点	9
3.5.1	节点 (1,1)	9
3.5.2	节点 (1,N)	9
3.5.3	节点 (N,1)	10
3.5.4	节点 (N,N)	11
4	系数矩阵	12
5	算法分析	13
6	运行结果	13

1 问题重述

$$\begin{cases} -\nabla \cdot \left(\frac{\nabla u}{|\nabla u|} \right) &= f \\ u|_{x=0} = 0, & u|_{y=0} = 0 \\ \frac{\partial u}{\partial x}|_{x=1} = y, & \frac{\partial u}{\partial y}|_{y=1} = x \\ \Omega = [0, 1] \times [0, 1] \end{cases} \quad (1)$$

已知精确解为

$$u(x, y) = xy \quad (2)$$

于是

$$f = -\nabla \cdot \left(\frac{\nabla u}{|\nabla u|} \right) \quad (3)$$

$$= -\nabla \cdot \left(\frac{y}{\sqrt{x^2 + y^2}}, \frac{x}{\sqrt{x^2 + y^2}} \right) \quad (4)$$

$$= - \left(- \frac{2xy}{(x^2 + y^2)^{\frac{3}{2}}} \right) \quad (5)$$

$$= \frac{2xy}{(x^2 + y^2)^{\frac{3}{2}}} \quad (6)$$

2 有限差分推导

将 $[0, 1]N$ 等分, 网格节点 $0 = x_0 < x_1 < \cdots < x_N = 1$

Figure 1: 网格剖分

$$x_i = ih \quad h = \frac{1}{N} \quad (7)$$

$$\left(\frac{\partial u}{\partial x}\right)_{ij} = \frac{u_{i+1,j} - u_{i-1,j}}{2h} + O(h^2) \quad (8)$$

$$\left(\frac{\partial u}{\partial y}\right)_{ij} = \frac{u_{i,j+1} - u_{i,j-1}}{2h} + O(h^2) \quad (9)$$

$$\frac{\partial}{\partial x} \left(\frac{1}{|\nabla u|} \frac{\partial u}{\partial x} \right)_{ij} \quad (10)$$

$$= \frac{1}{h} \left[\frac{1}{|\nabla u|_{i+\frac{1}{2},j}} \left(\frac{u_{i+1,j} - u_{i,j}}{h} \right) - \frac{1}{|\nabla u|_{i-\frac{1}{2},j}} \left(\frac{u_{i,j} - u_{i-1,j}}{h} \right) \right] + O(h^2) \quad (11)$$

$$= \frac{1}{h^2} \left[\frac{1}{|\nabla u|_{i-\frac{1}{2},j}} u_{i-1,j} - \left(\frac{1}{|\nabla u|_{i-\frac{1}{2},j}} + \frac{1}{|\nabla u|_{i+\frac{1}{2},j}} \right) u_{ij} + \frac{1}{|\nabla u|_{i+\frac{1}{2},j}} u_{i+1,j} \right] \quad (12)$$

$$\frac{\partial}{\partial y} \left(\frac{1}{|\nabla u|} \frac{\partial u}{\partial y} \right)_{ij} \quad (13)$$

$$= \frac{1}{h} \left[\frac{1}{|\nabla u|_{i,j+\frac{1}{2}}} \left(\frac{u_{i,j+1} - u_{i,j}}{h} \right) - \frac{1}{|\nabla u|_{i,j-\frac{1}{2}}} \left(\frac{u_{i,j} - u_{i,j-1}}{h} \right) \right] + O(h^2) \quad (14)$$

$$= \frac{1}{h^2} \left[\frac{1}{|\nabla u|_{i,j-\frac{1}{2}}} u_{i,j-1} - \left(\frac{1}{|\nabla u|_{i,j-\frac{1}{2}}} + \frac{1}{|\nabla u|_{i,j+\frac{1}{2}}} \right) u_{ij} + \frac{1}{|\nabla u|_{i,j+\frac{1}{2}}} u_{i,j+1} \right] \quad (15)$$

$$(16)$$

则

$$\nabla \cdot \left(\frac{1}{|\nabla u|} \nabla u \right)_{ij} \quad (17)$$

$$= \frac{\partial}{\partial x} \left(\frac{1}{|\nabla u|} \frac{\partial u}{\partial x} \right)_{ij} + \frac{\partial}{\partial y} \left(\frac{1}{|\nabla u|} \frac{\partial u}{\partial y} \right)_{ij} \quad (18)$$

$$= \frac{1}{h^2} \left[\frac{1}{|\nabla u|_{i-\frac{1}{2},j}} u_{i-1,j} + \frac{1}{|\nabla u|_{i+\frac{1}{2},j}} u_{i+1,j} + \frac{1}{|\nabla u|_{i,j-\frac{1}{2}}} u_{i,j-1} + \frac{1}{|\nabla u|_{i,j+\frac{1}{2}}} u_{i,j+1} \right. \\ \left. - \left(\frac{1}{|\nabla u|_{i-\frac{1}{2},j}} + \frac{1}{|\nabla u|_{i+\frac{1}{2},j}} + \frac{1}{|\nabla u|_{i,j-\frac{1}{2}}} + \frac{1}{|\nabla u|_{i,j+\frac{1}{2}}} \right) u_{ij} \right] + O(h^2) \quad (19)$$

$$|\nabla u|_{i-\frac{1}{2},j} = \left| \left(\frac{\partial u}{\partial x} \right)_{i-\frac{1}{2},j}, \left(\frac{\partial u}{\partial y} \right)_{i-\frac{1}{2},j} \right| \quad (20)$$

$$= \left| \left(\frac{u_{ij} - u_{i-1,j}}{h}, \frac{u_{i-\frac{1}{2},j+1} - u_{i-\frac{1}{2},j-1}}{2h} \right) \right| \quad (21)$$

又

$$\left\{ \begin{array}{lcl} u_{i-\frac{1}{2},j\pm 1} & = & u_{i-1,j\pm 1} + \frac{1}{2}h\left(\frac{\partial u}{\partial x}\right)_{i-1,j\pm 1} + O(h^2) \\ & = & u_{i-1,j\pm 1} + \frac{1}{2}h \cdot \frac{u_{i,j\pm 1} - u_{i-2,j\pm 1}}{2h} + O(h^2) \\ & = & u_{i-1,j\pm 1} + \frac{1}{4}(u_{i,j\pm 1} - u_{i-2,j\pm 1}) + O(h^2) \quad \text{当 } i \neq 1 \\ u_{\frac{1}{2},j\pm 1} & = & u_{1,j\pm 1} - \frac{1}{2}h \cdot \frac{u_{2,j\pm 1} - u_{0,j\pm 1}}{2h} + O(h^2) \quad \text{当 } i = 1 \\ & = & u_{1,j\pm 1} - \frac{1}{4}u_{2,j\pm 1} + O(h^2) \\ u_{i-\frac{1}{2},0} & = & 0 \quad \text{当 } j = 1 \end{array} \right. \quad (22)$$

同理可求得

$$|\nabla u|_{i+\frac{1}{2},j} = \left| \left(\left(\frac{\partial u}{\partial x} \right)_{i+\frac{1}{2},j}, \left(\frac{\partial u}{\partial y} \right)_{i+\frac{1}{2},j} \right) \right| \quad (23)$$

$$= \left| \left(\frac{u_{i+1,j} - u_{i,j}}{h}, \frac{u_{i+\frac{1}{2},j+1} - u_{i+\frac{1}{2},j-1}}{2h} \right) \right| \quad (24)$$

$$|\nabla u|_{i,j-\frac{1}{2}} = \left| \left(\left(\frac{\partial u}{\partial x} \right)_{i,j-\frac{1}{2}}, \left(\frac{\partial u}{\partial y} \right)_{i,j-\frac{1}{2}} \right) \right| \quad (25)$$

$$= \left| \left(\frac{u_{i+1,j-\frac{1}{2}} - u_{i-1,j-\frac{1}{2}}}{2h}, \frac{u_{i,j} - u_{i,j-1}}{h} \right) \right| \quad (26)$$

$$|\nabla u|_{i,j+\frac{1}{2}} = \left| \left(\left(\frac{\partial u}{\partial x} \right)_{i,j+\frac{1}{2}}, \left(\frac{\partial u}{\partial y} \right)_{i,j+\frac{1}{2}} \right) \right| \quad (27)$$

$$= \left| \left(\frac{u_{i+1,j+\frac{1}{2}} - u_{i-1,j+\frac{1}{2}}}{2h}, \frac{u_{i,j+1} - u_{i,j}}{h} \right) \right| \quad (28)$$

以及

$$\left\{ \begin{array}{lcl} u_{i+\frac{1}{2},j\pm 1} & = & u_{i,j\pm 1} + \frac{1}{2}h\left(\frac{\partial u}{\partial x}\right)_{i,j\pm 1} + O(h^2) \\ & = & u_{i,j\pm 1} + \frac{1}{2}h \cdot \frac{u_{i+1,j\pm 1} - u_{i-1,j\pm 1}}{2h} + O(h^2) \\ & = & u_{i,j\pm 1} + \frac{1}{4}(u_{i+1,j\pm 1} - u_{i-1,j\pm 1}) + O(h^2) \\ u_{i\pm 1,0} & = & 0 \quad \text{当 } j = 1 \\ u_{N+\frac{1}{2},j\pm 1} & = & u_{N,n\pm 1} + \frac{1}{2}hy_{i+1} \end{array} \right.$$

类似地,

$$\left\{ \begin{array}{l} u_{i\pm 1, j-\frac{1}{2}} = u_{i\pm 1, j} - \frac{1}{2}h(\frac{\partial u}{\partial x})_{i\pm 1, j} + O(h^2) \\ \quad = u_{i\pm 1, j} - \frac{1}{2}h \cdot \frac{u_{i\pm 1, j+1} - u_{i\pm 1, j-1}}{2h} + O(h^2) \\ \quad = u_{i\pm 1, j} - \frac{1}{4}(u_{i\pm 1, j+1} - u_{i\pm 1, j-1}) + O(h^2) \\ u_{0, j-\frac{1}{2}} = 0 \quad \text{当 } i = 1 \\ u_{i\pm 1, \frac{1}{2}} = u_{i\pm 1, 1} - \frac{1}{2}h \cdot \frac{u_{i\pm 1, 2} - u_{i\pm 1, 0}}{2h} + O(h^2) \\ \quad = u_{i\pm 1, 1} - \frac{1}{4}u_{i\pm 1, 2} + O(h^2) \quad \text{当 } j = 1 \end{array} \right.$$

$$\left\{ \begin{array}{l} u_{i\pm 1, j+\frac{1}{2}} = u_{i\pm 1, j} + \frac{1}{2}h(\frac{\partial u}{\partial x})_{i\pm 1, j} + O(h^2) \\ \quad = u_{i\pm 1, j} + \frac{1}{2}h \cdot \frac{u_{i\pm 1, j+1} - u_{i\pm 1, j-1}}{2h} + O(h^2) \\ \quad = u_{i\pm 1, j} + \frac{1}{4}(u_{i\pm 1, j+1} - u_{i\pm 1, j-1}) + O(h^2) \\ u_{0, j+\frac{1}{2}} = 0 \end{array} \right.$$

为了表述方便. 记

$$p_1 = \frac{1}{h|\nabla u|_{i-\frac{1}{2}, j}} \quad (29)$$

$$p_2 = \frac{1}{h|\nabla u|_{i+\frac{1}{2}, j}} \quad (30)$$

$$p_3 = \frac{1}{h|\nabla u|_{i, j-\frac{1}{2}}} \quad (31)$$

$$p_4 = \frac{1}{h|\nabla u|_{i, j+\frac{1}{2}}} \quad (32)$$

则有

$$-\frac{1}{h^2}[p_1 h u_{i-1, j} + p_2 h u_{i+1, j} + p_3 h u_{i, j-1} + p_4 h u_{i, j+1} - (p_1 + p_2 + p_3 + p_4) h u_{i, j}] = f \quad (33)$$

从而有

$$(p_1 + p_2 + p_3 + p_4)u_{i, j} - p_1 u_{i-1, j} - p_2 u_{i+1, j} - p_3 u_{i, j-1} - p_4 u_{i, j+1} = h f \quad (34)$$

3 边界条件

3.1 左边界

$i = 1, 2 \leq j \leq N - 1$ 时, 有

$$u_{i-1,j} = 0 \quad (35)$$

于是

$$(p_1 + p_2 + p_3 + p_4)u_{1j} - p_2u_{2j} - p_3u_{1,j-1} - p_4u_{1,j+1} = hf_{i,j} + p_1u_{0j} \quad (36)$$

$$= hf_{i,j} \quad (37)$$

3.2 右边界

$i = N, 2 \leq j \leq N - 1$ 时, 有

$$\frac{\partial u}{\partial x}|_{i+1,j} = y_j \quad (38)$$

于是

$$(p_1 + p_2 + p_3 + p_4)u_{ij} - p_1u_{i-1,j} - p_3u_{i,j-1} - p_4u_{i,j+1} = hf_{i,j} + p_2u_{N+1,j} \quad (39)$$

$$= hf_{i,j} + p_2u_{N+1,j} \quad (40)$$

对 $u_{N,j}$ 进行泰勒展开

$$u_{N,j} = u_{N+1,j} - \frac{1}{h} \frac{\partial u}{\partial x} + O(h^2) \quad (41)$$

$$= u_{N+1,j} - \frac{1}{h} y_j \quad (42)$$

于是

$$u_{N+1,j} = u_{N,j} + \frac{1}{h} y_j \quad (43)$$

从而, 式 (39) 为

$$(p_1 + p_2 + p_3 + p_4)u_{ij} - p_1u_{i-1,j} - p_3u_{i,j-1} - p_4u_{i,j+1} \quad (44)$$

$$= hf_{i,j} + p_2u_{N+1,j} \quad (45)$$

$$= hf_{i,j} + p_2(u_{N,j} + \frac{1}{h}y_j) \quad (46)$$

3.3 上边界

$2 \leq i \leq N-1, j = N$ 时, 有

$$\frac{\partial u}{\partial x}\bigg|_{i,N+1} = x_i \quad (47)$$

于是有

$$(p_1 + p_2 + p_3 + p_4)u_{iN} - p_1u_{i-1,N} - p_2u_{i+1,N} - p_3u_{i,N-1} \quad (48)$$

$$= hf_{i,N} + p_4u_{i,N+1} \quad (49)$$

对 $u_{i,N}$ 进行泰勒展开

$$u_{i,N} = u_{i,N+1} - \frac{1}{h} \frac{\partial u}{\partial y} + O(h^2) \quad (50)$$

$$= u_{i,N+1} - \frac{1}{h}x_i \quad (51)$$

于是

$$u_{i,N+1} = u_{i,N} + \frac{1}{h}x_i \quad (52)$$

从而, 式 (49) 为

$$(p_1 + p_2 + p_3 + p_4)u_{iN} - p_1u_{i-1,N} - p_2u_{i+1,N} - p_3u_{i+1,N} \quad (53)$$

$$= hf_{i,j} + p_4u_{i,N+1} \quad (54)$$

$$= hf_{i,j} + p_4(u_{iN} + \frac{1}{h}x_i) \quad (55)$$

3.4 下边界

$2 \leq i \leq N-1, j=1$ 时, 有

$$u_{i,j-1} = 0 \quad (56)$$

于是

$$(p_1 + p_2 + p_3 + p_4)u_{i1} - p_1u_{i-1,1} - p_2u_{i+1,j} - p_4u_{i,2} = hf_{i,j} + p_3u_{i,0} \quad (57)$$

$$= hf_{i,j} \quad (58)$$

3.5 节点

3.5.1 节点 (1,1)

$i=1, j=1$ 时有

$$u_{i-1,j} = 0 \quad (59)$$

$$u_{i,j-1} = 0 \quad (60)$$

于是

$$(p_1 + p_2 + p_3 + p_4)u_{11} - p_2u_{21} - p_4u_{12} = hf_{x_1,y_1} + p_1u_{01} + p_3u_{10} \quad (61)$$

$$= hf_{1,1} \quad (62)$$

3.5.2 节点 (1,N)

$i=1, j=N$ 时, 有

$$u_{i-1,j} = 0 \quad (63)$$

$$\frac{\partial u}{\partial y}|_{i,j+1} = x_i \quad (64)$$

于是

$$(p_1 + p_2 + p_3 + p_4)u_{1N} - p_2u_{2N} - p_3u_{1,N-1} = hf_{i,j} + p_1u_{0N} + p_4u_{1,N+1} \quad (65)$$

$$= hf_{i,j}u_{0N} + p_4u_{1,N+1} \quad (66)$$

对 $u_{1,N}$ 进行泰勒展开有

$$u_{1,N} = u_{1,N+1} - \frac{1}{h} \frac{\partial u}{\partial y} + O(h^2) \quad (67)$$

$$= u_{1,N+1} - \frac{1}{h} x_1 \quad (68)$$

于是

$$u_{1,N+1} = u_{1,N} + \frac{1}{h} x_1 \quad (69)$$

于是式 (65) 为

$$(p_1 + p_2 + p_3 + p_4)u_{1N} - p_2u_{2N} - p_3u_{1,N-1} = hf_{i,j} + p_4u_{1,N+1} \quad (70)$$

$$= hf_{i,j} + p_4(u_{1,N} + \frac{x_1}{h}) \quad (71)$$

3.5.3 节点 (N,1)

$i = N, j = 1$ 时, 有

$$u_{N,j-1} = 0 \quad (72)$$

$$\frac{\partial u}{\partial x} \Big|_{i+1,j} = y_j \quad (73)$$

于是有

$$(p_1 + p_2 + p_3 + p_4)u_{N1} - p_1u_{N-1,1} - p_4u_{N2} = hf_{i,j} + p_2u_{N+1,1} + p_3u_{N,0} \quad (74)$$

$$= hf_{i,j} + p_2u_{N+1,1} \quad (75)$$

对 u_{N1} 进行泰勒展开有

$$u_{N1} = u_{N+1,1} - \frac{1}{h} \frac{\partial u}{\partial x} + O(h^2) \quad (76)$$

$$= u_{N+1,1} - \frac{1}{h} y_1 \quad (77)$$

于是

$$u_{N+1,1} = u_{N,1} + \frac{1}{h} y_1 \quad (78)$$

于是式 (74) 为

$$(p_1 + p_2 + p_3 + p_4)u_{N1} - p_1 u_{N-1,1} - p_4 u_{N2} \quad (79)$$

$$= h f_{i,j} + p_2 u_{N+1,1} \quad (80)$$

$$= h f_{i,j} + p_2 (u_{N,1} + \frac{y_1}{h}) \quad (81)$$

3.5.4 节点 (N,N)

$i = N, j = N$ 时, 有

$$\frac{\partial u}{\partial x} \Big|_{i+1,j} = y_j \quad (82)$$

$$\frac{\partial u}{\partial y} \Big|_{i,j+1} = x_i \quad (83)$$

于是

$$(p_1 + p_2 + p_3 + p_4)u_{NN} - p_1 u_{N-1,N} - p_3 u_{N,N-1} \quad (84)$$

$$= h f_{i,j} + p_2 u_{N+1,N} + p_4 u_{N,N+1} \quad (85)$$

由式 (43) 及式 (52), 有

$$u_{N+1,N} = u_{N,N} + \frac{1}{h} y_N \quad (86)$$

$$u_{N,N+1} = u_{N,N} + \frac{1}{h} x_N \quad (87)$$

于是式 (88) 可写成

$$(p_1 + p_2 + p_3 + p_4)u_{NN} - p_1 u_{N-1,N} - p_3 u_{N,N-1} \quad (88)$$

$$= hf_{ij} + p_2(u_{NN} + \frac{1}{h}y_N) + p_4(u_{NN} + \frac{1}{h}x_N) \quad (89)$$

4 系数矩阵

设 $U = (u_{11}, u_{21}, \dots, u_{N1}, u_{12}, \dots, u_{N2}, u_{13}, \dots, u_{N-1,N}, u_{NN})'$, A 为 $N^2 * N^2$ 的五对角矩阵.

$$A = \begin{bmatrix} \sum_{i=1}^4 p_i & -p_2 & \cdots & -p_4 & \cdot & \cdots & \cdots \\ -p_1 & \sum_{i=1}^4 p_i & -p_2 & \cdots & -p_4 & \cdots & \cdots \\ \vdots & -p_1 & \sum_{i=1}^4 p_i & \cdots & \cdots & \cdots & \vdots \\ \vdots & \vdots & \vdots & \vdots & \vdots & \vdots & \vdots \\ -p_3 & \cdots & \cdots & \cdots & \cdots & \cdots & \cdots \\ \cdot & -p_3 & \cdots & \cdots & \cdots & \cdots & \cdots \\ \vdots & \vdots & \vdots & \vdots & \vdots & \vdots & \vdots \\ \cdots & \cdots & \cdots & \cdots & \cdots & \cdots & \sum_{i=1}^4 p_i \end{bmatrix} \quad (90)$$

根据上述边界条件的讨论, 我们有

$$F_{ij} = \begin{cases} hf_{ij} + p_2(u_{Nj} + \frac{1}{h}y_j) & i = N, 2 \leq j \leq N-1 \\ hf_{ij} + p_4(u_{iN} + \frac{1}{h}x_i) & j = N, 2 \leq i \leq N-1 \\ hf_{ij} + p_2(u_{NN} + \frac{1}{h}y_N) + p_4(u_{NN} + \frac{1}{h}x_N) & i = j = N \\ hf_{ij} & others \end{cases} \quad (91)$$

于是, 我们的目标是求解线性方程

$$AU = F \quad (92)$$

其中, $F = (F_{11}, F_{21}, \dots, F_{N1}, F_{12}, \dots, F_{N2}, F_{13}, \dots, F_{N-1,N}, F_{NN})'$. A 中的 p_i 是根据上一步的值确定出来的, 每次算出的 u 又作为下一步 p_i 的输入

5 算法分析

由上述推导我们得出目标即是要求解方程 $AU = F$, 但 A 中含有与 u 有关的参数, 于是想到先给 u 一个初值, 不断迭代直至收敛到解。所以代码思路基本上是这样

```
1      给定初值 u0;  
2      根据 u0 组装出系数矩阵 A 及 F;  
3      for lp = 1:maxIters  
4          u = A\F;  
5          err = norm(u-exu);  
6          if err < errStop  
7              break;  
8          end  
9          u0 = u;  
10     end  
11     plot;
```

6 运行结果

失败原因:

```
>> SolveNonlinearPDE  
Warning: Matrix is singular, close to singular or badly scaled. Results may be inaccurate. RCOND = NaN.  
> In SolveNonlinearPDE (line 88)  
Warning: Matrix is singular, close to singular or badly scaled. Results may be inaccurate. RCOND = NaN.  
> In SolveNonlinearPDE (line 88)  
Warning: Matrix is singular to working precision.
```

Figure 2: 错误信息

时间有限, 没有调试成功。

附录

代码如下:

```

1 function [err, step] = SolveNonlinearPDE
2 global N;
3 N = 10;
4 global h;
5 global x;
6 global y;
7 h = 1/(N+1);
8 maxLoop = 100;
9 errStop = 1.0e-6;
10
11 u = ones(N*N, 1);
12 exu = zeros(N*N, 1);
13
14 x = h * (1:N);
15 y = h * (1:N);
16
17 rowIdx = zeros(1,N*N+1);
18 F = zeros(N*N, 1);
19 for lp = 1:maxLoop
20 %% Assign value
21 %% Matrix A
22 %% the first row
23 i = 1;
24 j = 1;
25 rowIdx(1) = 1;
26 colIdx(1) = 1;
27 entries(1) = p1func(u,i,j) + p2func(u,i,j) + p3func(u,i,j) + p4func
    (u,i,j);
28 F(1,1) = h * RightF(x(1),y(1));
